TEMPORARY POWER PROCEDURE

Temporary power is the utilization of portions of the permanent wiring system within a building to facilitate construction, and is limited to those portions necessary to complete construction. An application for temporary power may be obtained from the Planning and Development Department, Inspection Services Division by the general contractor. This form should be taken to all subcontractors whose systems are to be utilized. Each subcontractor needs to sign the form, giving the general contractor permission to use that system during construction. The general contractor then signs the form and returns it to our office with a processing fee of **\$75.00**.

Temporary power inspections are required for each trade which is to be utilized that has not already been finalized. For example, if the plumbing and electrical systems are to be utilized, and the electrical system has already received its final inspection, then only the plumbing system needs to be inspected in order to receive approval of temporary power. It is the responsibility of the general contractor to call each of his subcontractors and give them the new permit number to use when calling in temporary power inspections. Do not use the number for the trade permits!

The general contractor needs to be sure to call ext. 3100 to make application for service to be turned on in their name with the Customer Service Department. This should be done the same day they make application for temporary power with the Inspection Services Division. **THE APPROVAL OF TEMPORARY POWER DOES NOT INCLUDE THE APPROVAL FOR OCCUPANCY OF THE BUILDING. No occupancy should occur until a Certificate of Compliance or Temporary Certificate of Occupancy is approved.**

If you need further information regarding either Temporary Power or Temporary Occupancy, please call 833-3151 between the hours of 8:00 a.m. to 5:00 p.m.
